

FLEXI TANKS

EASY LIQUID STORAGE

Flexi Tanks are made from a polyester fabric with a high quality plastic layer on both sides. This plastic can resist a wide range of liquids and provides maximum protection against UV radiation. This means it will last a very long time.

The strong fabric easily absorbs the mechanical forces that arise inside the FlexiTank during its use. In the design large safety margins are used.

Flexi Tanks are suitable for all non-corrosive liquids and can be placed on just about any flat surface.

The standard delivery includes the FlexiTank with sealable inspection opening, ventilation, a pipeset with valves and all its installation material. Upon request agitating equipment can be supplied as an extra.

ADVANTAGES:

- Low Cost
- Portable, Easy to Move
- Completely Prefabricated
- Available in All Sizes
- Resistance to Atmospheric Conditions
- No Expensive Foundation Required
- Low Visual Impact
- Can Be Assembled Within 1 Day

COMMON APPLICATIONS:

- Drinking Water Storage
- Irrigation Water Storage
- Waste Water Storage
- Slurry Storage
